Module Description

This module covers the fundamentals required to work comfortably with the Linux operating system and shell.

Module Summary

Linux is an indispensable tool and system in the field of cybersecurity. Many servers run on Linux and offer a wide range of possibilities for offensive security practitioners, network defenders, and systems administrators. This module covers the essentials for starting with the Linux operating system and terminal.

In this module, we will cover:

- Linux structure
- Using the shell
- Navigating the Linux operating system
- Working with files and directories
- Linux administration
- Service management
- Permissions management

January 27, 2021

Very good introduction to the basics of navigating Linux. A great way to learn.

**eag*******

January 30, 2021

I learned a lot from this course. Even after some familiarity in Linux still the questions are really amazing it took me quite

while to get the correct answers. The Content was super amazing and easy. Anyone can learn those who don't have prior knowledge

**ass****

February 7, 2021

am using linux all the time but i learn a lot , sorting , reading and finding this course is very good to start with linux.

**cra*******

March 3, 2021

Learnt a whole bunch of new commands, definitely worth as a refresher for both the beginner and advanced Linux user. Great questions not so straight forward . Thank you :)

**W4H*****

March 13, 2021

This Module is well written and easy to understand. I learn a lot from this module about Linux how they work, how to use it . I glad I enrolled with this module
